

CATALYST SURFACE AGENT

Autonomous event discovery. Options execution. Verifiable evidence.

A complete autonomous loop for scheduled market events

01**DISCOVER**

Scan liquid names for scheduled event convexity

02**VERIFY**

Confirm the event and replay its own option history

03**EXECUTE**

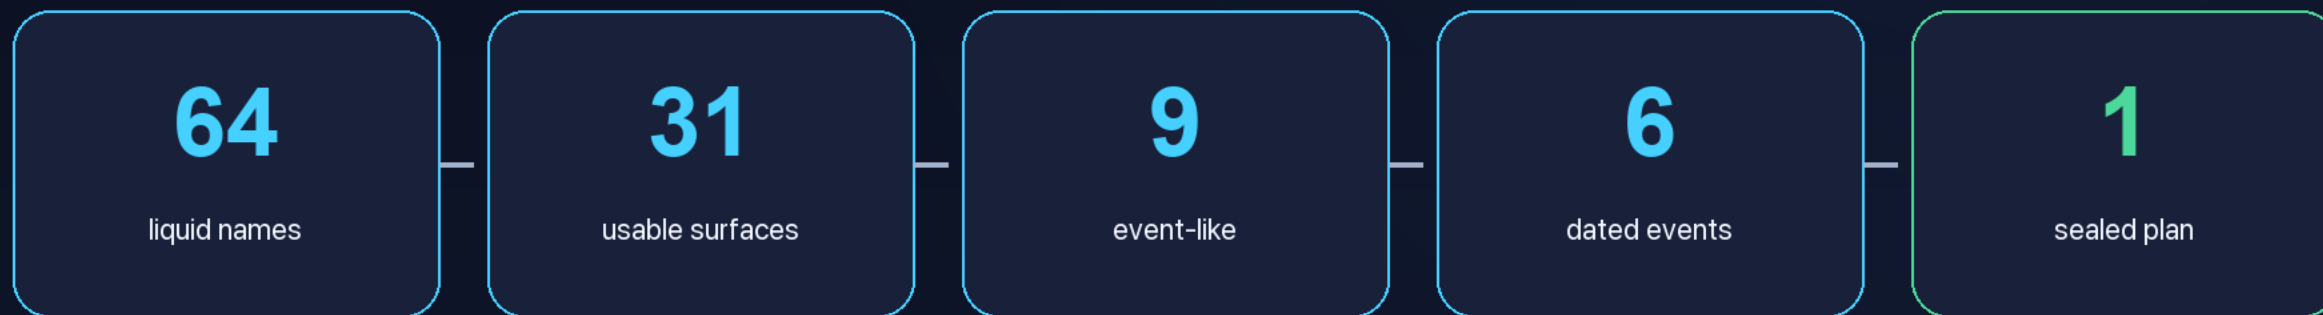

Apply live surface gates and exact maximum loss

04**PROVE**

Reconcile the broker and seal the evidence trail

The same agent discovers, decides, trades, checks its work, and records the result.

One engine searches the market every week

AVGO survived this week. A different event or an empty plan can survive next week.

Featherless interprets. Policy holds the keys

MODEL AUTHORITY

- Check whether the catalyst remains intact
- Return typed direction, novelty, and confidence
- Require source-grounded committee agreement
- Veto risk when evidence is missing or malformed

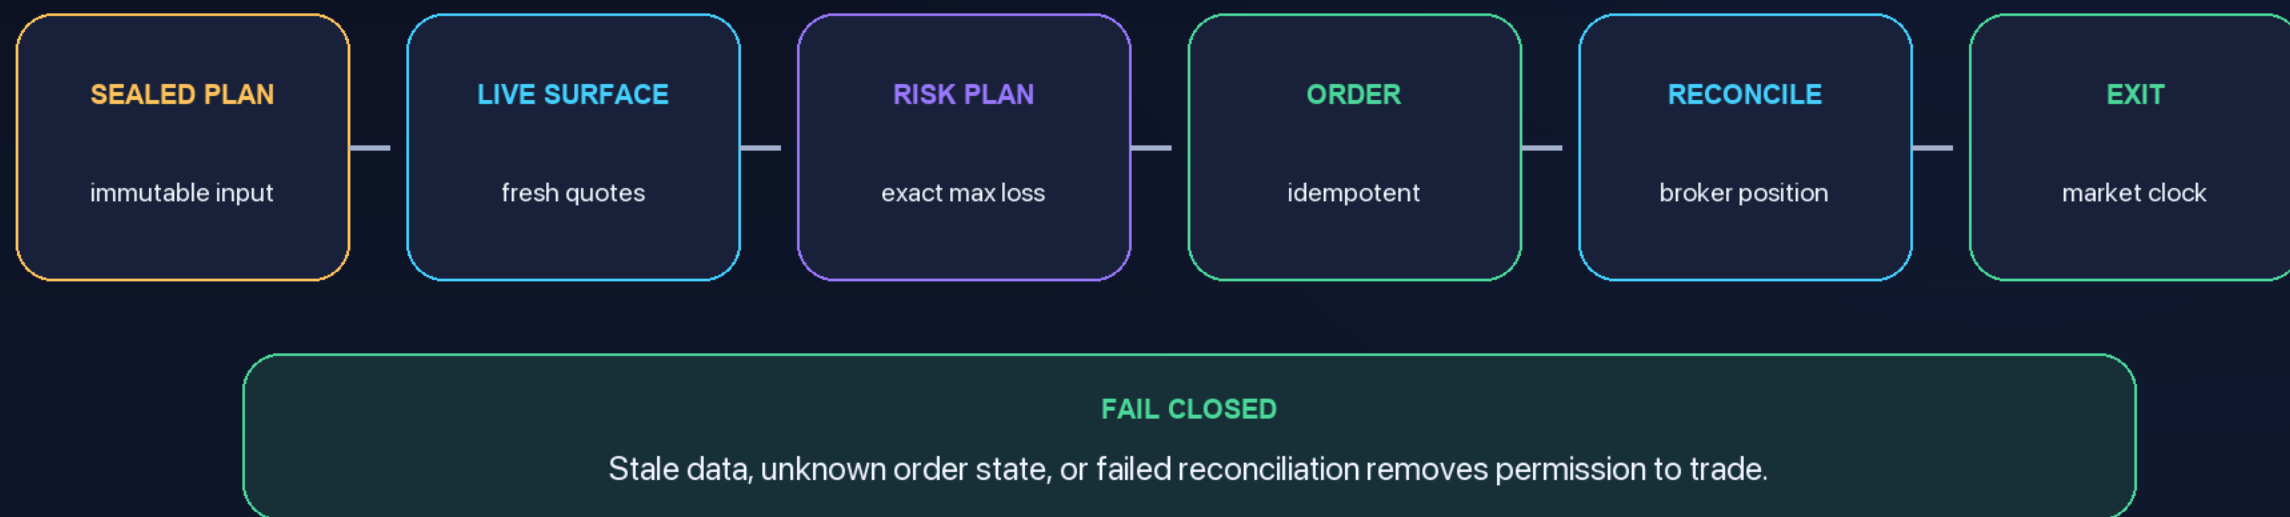

POLICY BOUNDARY

- LOCK** Cannot invent a ticker or contract
- LOCK** Cannot enlarge quantity or maximum loss
- LOCK** Cannot relax price, freshness, or liquidity gates
- LOCK** Cannot delay the fixed deadline exit

Alpaca MCP closes the loop

Live gates run every minute until the account is flat

Judges can inspect every claim

01**LIVE DASHBOARD**

Selection funnel, model committee, current plan, broker lifecycle, and P&L.

02**HASH CHAIN**

Every decision is secret-redacted and tamper-evident. Anyone can recompute it.

03**FAILURE DRILLS**

Eight of eight rehearsal groups passed, including stale data and model failure.

The evidence trail records rejected ideas as clearly as executed orders.

The engine found the move. Pricing is the next edge

MOVE

-6.17%

entry to exit

PREMIUM

8.04%

of spot paid

EXIT

09:45:18

18 sec after target

ACCOUNT

-10.70%

measured paper result

VALUE MARGIN

Trade only when conservative liquidation value clears the marketable debit.

UNCERTAINTY SIZE

Reduce allocation as premium and confidence uncertainty increase.

STRUCTURE CHOICE

Use capped convexity for moderate moves, or remain flat.
